Scientific publications do more than just let scientists track research trends. They provide critical information for novel hypotheses and experimental design in preclinical research. Since our partnership with Wiley in 2018, combining their high-impact scientific content with BenchSci’s industry-leading machine learning technology has helped scientists discover new insights in millions of scientific experiments. This targeted use of machine learning empowers scientists worldwide to make more informed decisions, perform more successful experiments, and accelerate the pace of life-saving research.
